

CONTENTS

1.	Normal Anatomy and Histology	1
	Small Intestine	1
	Anatomy	1
	Histology	2
	Colon	10
	Anatomy	10
	Histology	12
	Appendix	15
	Anatomy	15
	Histology	15
	Anus	15
	Anatomy	15
	Histology	18
2.	Hamartomatous Polyps, Heterotopias, Unclassified Polyps, and Tumor-Like Lesions .	21
	Brunner Gland Polyps	21
	Cronkhite-Canada Polyposis	25
	Endometriosis Involving the Intestines	27
	Gastric Heterotopia, Pancreatic Heterotopia, and Meckel Diverticula	30
	Meckel Diverticula	32
	Hamartomatous Polyps	34
	Juvenile Polyps and Juvenile Polyposis Syndrome	35
	PTEN Hamartoma Tumor Syndrome	40
	Peutz-Jeghers Syndrome	43
	Malakoplakia	48
	Mucosal Prolapse Polyps and Similar Lesions	49
	Cap Polyposis	49
	Solitary Rectal Ulcer Syndrome	53
	Inflammatory Cloacogenic Polyp	54
	Filiform Polyps (Postinflammatory Polyps)	54
	Differential Diagnosis of Mucosal Prolapse Polyps	56
3.	Epithelial Neoplastic (Premalignant) Polyps and Hyperplastic Polyps of the Large	
	Intestine	63
	Conventional Adenomas	64
	Development of Carcinoma in Conventional Adenomas	71
	Pseudoinvasion (Glandular Displacement in Neoplastic Polyps)	72
	Recommendations on Reporting Conventional Adenomas	73

Technical Issues with the Biopsy Diagnosis of Conventional Adenomas	75
Serrated Polyps and the Serrated Pathway to Adenocarcinoma	77
Hyperplastic Polyps	78
Sessile Serrated Adenoma/Polyp	82
Advanced and High-Risk SSA/P	88
Management of SSA/P	88
Reactive Lesions Resembling SSA/P	88
Technical Issues with the Biopsy Diagnosis of Serrated Lesions	89
Traditional Serrated Adenoma	90
Other Polyps that Occasionally Lead to Colon Carcinoma	95
4. Carcinomas of the Small and Large Intestines (Excluding Neuroendocrine Neoplasms)	99
Epidemiology and Risk Factors	99
Precursor Lesions	101
Classification	101
Gross and Endoscopic Findings	102
Histologic Findings	103
Classic Pattern (Adenocarcinoma, Not Otherwise Specified [NOS])	105
Mucinous Carcinoma	107
Signet Ring Carcinoma	109
Medullary Carcinoma	109
Serrated Adenocarcinoma	109
Micropapillary Carcinoma	113
Low-Grade Tubuloglandular Carcinoma	115
Rare and Unusual Tumor Types	115
Grading of Adenocarcinoma	121
Special Stains in the Diagnosis and Management of Colorectal Carcinoma	121
Routine Molecular Testing of Colorectal Carcinoma	123
Biopsy Diagnosis of Colorectal Carcinoma	123
Pathologic Examination of Resected Colorectal Carcinoma	124
Gross Examination	125
Microscopic Examination	126
Staging of Colorectal Carcinomas	127
T Stages: General Features	127
T-Stage Controversies	127
Lymph Node Involvement	132
N-Stage Controversies	132
Isolated Tumor Cells	133
Non-Nodal Tumor Deposits (Discontinuous Extramural Extension)	133
Nonregional Lymph Node Metastases	136

Additional Prognostic Factors Not Included in the Stage	136
Tumor Infiltrating Lymphocytes and a Chrohn-Like Tumoral Reaction	136
Vascular Space Invasion	136
Tumor Budding	138
Perineural Invasion	139
Additional Comments on Staging	139
Adenomas and Adenocarcinomas of the Small Intestine	139
General Features	139
Small Intestinal Adenomas	140
Pyloric Gland Adenoma	144
Other Adenomas Involving the Small Intestine	148
Small Bowel Adenocarcinoma	148
Inflammatory Bowel Disease-Associated Neoplasia	153
Hereditary Colorectal Carcinoma	159
Lynch Syndrome	159
Familial Colorectal Cancer Type X	167
Familial Adenomatous Polyposis	167
MUTYH-Associated Polyposis	172
Carcinomas in Juvenile Polyposis Syndrome	175
Carcinomas in Peutz-Jeghers Syndrome	175
Serrated (Hyperplastic) Polyposis	177
5. Tumors and Tumor-Like Lesions of the Vermiform Appendix	193
Benign and Dysplastic Hyperplastic/Serrated and Noninvasive Lesions	193
Conventional Tubular/Tubulovillous Adenoma of Nonmucinous and Nonserrated	
Subtype and Associated Adenocarcinoma	196
Mucinous Neoplasm	197
Stratification of Prognostic Groups and Management of Appendiceal Mucinous	
Adenocarcinoma	210
Molecular and Genetic Features of Appendiceal Mucinous Adenocarcinoma .	212
Goblet Cell Carcinoid and Associated Adenocarcinoma	212
Clinical and Pathologic Features	213
Classification of GCC	213
Immunoprofile	215
Stratification of Prognostic Groups and Recommended Management	219
Molecular Genetic Features	220
Other Tumor and Tumor-Like Lesions of the Appendix	221
Intussusception and Inversion of the Appendix	221
Neurofibroma and Ganglioneuroma	221
Fibrous Obliteration (Appendiceal Neuroma)	221
Endometriosis and Endosalpingiosis	222

Atypical Mesothelial Proliferation and Mesothelioma	222
Mesenchymal Tumors	222
Lymphoma	223
6. Anal Tumors	229
Condylomas and Anal Intraepithelial Neoplasia/Bowen Disease	229
Squamous Cell Carcinoma	236
Anal Paget Disease	244
Anal Adenocarcinoma Including Anal Duct Carcinomas	247
Anal Melanoma	248
Miscellaneous Anal Lesions	252
Fibroepithelial Polyps	252
Skin Appendage Tumors	252
Anal Mucosal Prolapse Polyps	256
Inflammatory Conditions	256
7. Well-Differentiated Neuroendocrine Tumors of the Intestines	261
Diffuse Neuroendocrine Cell System of the Gastrointestinal Tract	261
Neuroendocrine Tumors of the Intestine	263
Classification	263
Clinical and Biochemical Diagnosis of Well-Differentiated Neuroendocrine Tumors	265
Tumor Staging	266
Molecular Genetic Features	266
Treatment and Prognosis	269
Neuroendocrine Tumors of the Duodenum	270
Epidemiology and Clinical Presentation	270
Pathologic Features	271
Treatment and Prognosis	275
Neuroendocrine Tumors of the Jejunum and Ileum	277
Epidemiology and Clinical Presentation	277
Pathologic Features	277
Treatment and Prognosis	279
Neuroendocrine Tumors of the Appendix	281
Epidemiology and Clinical Presentation	281
Pathologic Features	283
Treatment and Prognosis	285
Neuroendocrine Tumors of the Colorectum	286
Epidemiology and Clinical Presentation	286
Pathologic Features	286
Treatment and Prognosis	289

8. Mesenchymal Tumors of the Intestines	295
Gastrointestinal Stromal Tumors	295
Inflammatory Fibroid Polyp of the Small Intestine and Colon.	305
Neural Tumors of the Intestines.	307
Schwannoma	307
Schwann Cell Hamartoma.	308
Benign Fibroblastic Polyp/Perineurioma	311
Neurofibroma	311
Ganglioneuroma and Ganglioneuromatosis	311
MEN2B-Associated Neuroma	315
Nerve Sheath Proliferations Found in PTEN Hamartoma Tumor Syndrome (Cowden and Bannayan-Riley-Ruvalcaba Syndrome)	315
Granular Cell Tumor	315
Gangliocytic Paraganglioma	317
Smooth Muscle Tumors	319
Colon	319
Small Intestine	320
Adipose Tissue Tumors	321
Submucosal Lipoma and Lipomatous Polyposis	321
Liposarcomas	324
Rhabdomyosarcoma	324
Vascular Tumors and Mimics	324
Angiomas	324
Vascular Malformations	326
Angiosarcoma	326
Kaposi Sarcoma	328
Mesenteric Tumors	330
Mesenteric Fibromatosis	330
Inflammatory Myofibroblastic Tumor	333
Sclerosing Mesenteritis.	335
Calcifying Fibrous Pseudotumor	336
Translocation-Associated Sarcomas	338
Pseudosarcomatous Changes in Ulcers and Polyps.	339
9. Hematopoietic Disorders	349
Benign Lymphoid Hyperplasia.	349
Extranodal Marginal Zone Lymphoma of Mucosa-Associated Lymphoid Tissue . .	354
Follicular Lymphoma	360
Small Lymphocytic Lymphoma/Chronic Lymphocytic Leukemia	363
Mantle Cell Lymphoma	365

Diffuse Large B-Cell Lymphoma	366
Burkitt Lymphoma	372
Hodgkin Lymphoma of the Gastrointestinal Tract	373
Post-Transplant Lymphoproliferative Disorder	374
Lymphoproliferative Disorders Associated with Immunosuppression	379
T-Cell Lymphoma, Not Otherwise Specified	382
Extranodal NK/T-Cell Lymphoma	382
Enteropathy-Associated T-Cell Lymphoma	383
Follicular Dendritic Cell Sarcoma	386
Myeloid Sarcoma	388
Systemic Mastocytosis	389
10. Metastases to the Intestines	399
Small Intestine	399
Colon	408
Primary Colorectal Cancer versus Secondary Malignancies of the Colon	414
Gross Features of Colorectal Carcinoma versus Secondary Neoplasms	414
Microscopic Features of Colorectal Carcinoma versus Secondary Neoplasms	414
Non-Neoplastic Processes that Mimic Colorectal Malignancy	416
Endometriosis	416
Appendix	422
Index	427
